

Engineering Onboarding Guide

A fictional internal policy created for the Atlas knowledge assistant portfolio demonstration.

DOCUMENT OWNER	Engineering Enablement
EFFECTIVE DATE	1 September 2026
VERSION	1.0
CLASSIFICATION	Internal

For demonstration only. This document does not describe a real company and should not be treated as legal, employment, security, or operational advice.

Welcome to Acme

This guide gives new engineering employees a clear path through their first week. Your manager and onboarding buddy will help you complete each step.

Before day one

- Confirm delivery or collection of your company laptop.
- Read the acceptable-use and information-security policies.
- Check the calendar invitations for orientation and team introductions.

Day one: identity and access

- Activate your company account through the invitation sent by IT.
- Enroll in **multi-factor authentication** immediately.
- Set up the approved password manager.
- Sign in to email, chat, the People portal, and the service desk.
- Meet your manager and onboarding buddy.

Days two and three: engineering setup

- Request GitHub organization access through the IT service desk.
- Install the approved development tools listed in the engineering portal.
- Clone the starter repository and run its automated checks.
- Review the team's architecture overview and coding standards.
- Never copy credentials into source code or commit secrets to Git.

Days four and five: first contribution

- Pair with your buddy on a small, low-risk task.
- Open a pull request and respond to review feedback.
- Observe the deployment process in a non-production environment.
- Schedule a first-week check-in with your manager.

Production access

Production access is not granted automatically. It requires completed security training, a documented business need, and approval from the engineering manager. Access must use the employee's individual account and the least privilege required for the task.

Getting help

Use the IT service desk for accounts and devices, the Security channel for security questions or incidents, and your onboarding buddy for development-environment help. Report suspected security incidents immediately.

First-week checklist

- SSO and MFA active
- Password manager configured
- GitHub request approved
- Development environment working
- Security training complete
- First pull request opened
- Manager check-in completed
